

CATALOGUE NO. 6202.0

EMBARGOED UNTIL 11.30 A.M. 7 OCTOBER 1993

## THE LABOUR FORCE, AUSTRALIA, SEPTEMBER 1993, PRELIMINARY

Care should be taken in the interpretation of month-to-month movements in estimates (see paragraph 15 of the Explanatory Notes).

### MAIN FEATURES

The September 1993 seasonally adjusted estimate of employed persons was 7,774,700, an increase of 45,100 since August 1993, including an increase of 37,200 (to 1,857,900) in part-time employment. Full-time employment increased slightly to 5,916,800. Male employment rose by 27,100 to 4,487,900, with increases of 13,600 and 13,500 respectively in full-time and part-time employment. For females, employment rose by 18,000 to 3,286,800, with an increase of 23,700 in the number of females employed part time outweighing a fall in full-time employment.

Provisional trend estimates of employment have been increasing since February 1993 mainly due to trend estimates of part-time employment increasing for both males and females. For full-time employment there have been small falls in the last four months. For males, the trend in full-time employment is now flat after increasing since

December 1992 while for females the full-time trend has been falling since May 1993 (see graphs on page 2).

The September 1993 seasonally adjusted estimate of unemployed persons fell by 16,300 to 947,200, mainly due to a fall of 12,800 in the number of unemployed persons seeking part-time work. Male unemployment fell by 15,100 including a fall of 10,900 in the number of unemployed males seeking full-time work. Female unemployment was relatively flat, with a fall of 8,600 in the number of unemployed females seeking part-time work matching a similar increase in the number of unemployed females seeking full-time work. Provisional trend estimates of unemployment have been increasing since May 1993.

The seasonally adjusted estimate of the unemployment rate for September 1993 was 10.9%, a fall of 0.2 percentage points since August 1993. For males, the unemployment rate fell by 0.3 percentage points to 11.3%, and for females, the unemployment rate fell to 10.3%. For 15 to 19 year olds, the seasonally adjusted full-time unemployment rate was 32.4%, compared with 32.5% in August 1993. This is the proportion of 15 to 19 year olds in the full-time labour force unable to find employment.

The provisional trend estimate of the unemployment rate was unchanged at 10.9%. Trend estimates of the full-time unemployment rate have been relatively flat in recent months. For males, the trend full-time unemployment rate remained at 11.6% for the third consecutive month, while for females the rate has increased in each of the last four months and now stands at 12.5%. The trend part-time unemployment rate for males has fallen over the past three months, while for females it has been increasing since May 1993 (see graphs on page 3).

The September 1993 seasonally adjusted estimates of the unemployment rate for the States were (with August 1993 estimates in brackets): New South Wales 10.6% (10.7%); Victoria 12.4% (13.0%); Queensland 11.1% (11.2%); South Australia 10.4% (10.0%); Western Australia 8.9% (9.3%) and Tasmania 12.6% (13.4%).

The seasonally adjusted estimate of the labour force participation rate for September 1993 was 62.7% compared with 62.6% in August 1993. For males, the participation rate increased slightly to 73.8% and for females the participation rate increased by 0.2 percentage points to 52.0%. The provisional trend estimate of the participation rate was unchanged at 62.6%.

| Indicates break in series — see paragraph 6 of the Explanatory Notes.

### INQUIRIES

- for further information about statistics in this publication and the availability of related unpublished statistics, contact Heather Crawford on Canberra (06) 252 6525 or any ABS State office.
- for information about other ABS statistics and services please refer to the back page of this publication.

### EMPLOYED PERSONS: TREND SERIES

The graphs on this page have been drawn to a semi-logarithmic scale to enable comparisons to be made of rates of change — See paragraph 20 of the Explanatory Notes.

| Indicates break in series — see paragraph 6 of the Explanatory Notes.

MALES: LOOKING FOR PART-TIME WORK

FEMALES: LOOKING FOR PART-TIME WORK

Indicates break in series — see paragraph 6 of the Explanatory Notes.

## Revisions to trend estimates — what if . . . ?

As new seasonally adjusted estimates are published, provisional trend estimates for the most recent six months are revised (see paragraphs 17 and 19 of the Explanatory Notes).

The tables and graphs below show the extent of revisions to current trend estimates under various assumptions about the values of the seasonally adjusted estimates for next month (October) of employment and the unemployment rate (Note: these are illustrative cases, and are not forecasts of future estimates).

The examples considered in the tables below are:

- (1) The October seasonally adjusted estimate is the same as that for September;
- (2) The October seasonally adjusted estimate is higher than the September estimate by (a) 0.33% for employment and (b) 2.3% for the unemployment rate (ie by the average absolute percentage change);
- (3) The October seasonally adjusted estimate is lower than the September estimate by (a) 0.33% for employment and (b) 2.3% for the unemployment rate;
- (4) The October seasonally adjusted estimate is such that the resultant September and October trend estimates are the same.

### Employment ('000)

*Revised trend estimates if October 1993 seasonally adjusted est:*

Trend estimates published this month	is the same as Sept. 1993 (7774.7)	rises by 0.33% (7800.6)	falls by 0.33% (7748.9)	results in the same trend estimate for Sept. and October (7673.1)
1993 —				
July	7730.6	7731.7	7732.8	7730.5
August	7745.0	7746.9	7750.7	7743.1
September	7755.0	7759.9	7767.1	7752.7
October (new)	..	7774.3	7785.2	7763.4
				7731.5

For example, if seasonally adjusted employment were to increase in October 1993 by 0.33 per cent to 7,800,600, the trend estimates for the previous three months would be revised to: September 7,767,100; August, 7,750,700; July, 7,732,800.

### Unemployment rate (per cent)

*Revised trend estimates if October 1993 seasonally adjusted est:*

Trend estimates published this month	is the same as Sept. 1993 (10.86)	rises by 2.3% (11.11)	falls by 2.3% (10.61)	results in the same trend estimate for Sept. and October (10.79)
1993 —				
July	10.9	10.9	10.9	10.9
August	10.9	10.9	10.9	10.9
September	10.9	10.9	11.0	10.8
October (new)	..	10.9	11.0	10.8
				10.9

For example, if the October 1993 seasonally adjusted estimate of the unemployment rate were to increase by 2.3 per cent to 11.11 per cent, the September 1993 trend estimate of the unemployment rate would be 11.0 per cent.

TABLE 1. LABOUR FORCE STATUS OF CIVILIAN POPULATION AGED 15 AND OVER

## EXPLANATORY NOTES

### **Introduction**

This publication contains preliminary estimates of the civilian labour force derived from the labour force survey component of the monthly population survey. Estimates for the current month are preliminary and subject to revision. Revised estimates for the current month and more detailed estimates will be published in *The Labour Force, Australia* (6203.0).

### **The population survey**

2. The population survey is based on a multi-stage area sample of private dwellings (currently about 29,000 houses, flats, etc.) and a list sample of non-private dwellings (hotels, motels, etc.), and covers about one-half of one per cent of the population of Australia. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

### **Scope**

3. The Labour Force Survey includes all persons aged 15 and over except: members of the permanent defence forces; certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations; overseas residents in Australia; and members of non-Australian defence forces (and their dependants) stationed in Australia. From July 1993 Jervis Bay Territory is also excluded from the scope of the survey. Prior to July 1993, it was included in estimates for the Australian Capital Territory.

### **Coverage**

4. In the Labour Force Survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. The coverage rules are, necessarily, a balance between theoretical and operational considerations. Nevertheless, the chance of a person being enumerated at two separate dwellings in the survey is considered to be negligible.

### **Population benchmarks**

5. New benchmarks based on the results of the 1986 Census of Population and Housing were introduced in the February 1989 issue of this publication. Labour force estimates were revised for the period January 1984 to January 1989. All estimates produced after January 1989 are based on the new benchmarks.

### **Revision of series**

6. From April 1986, the definition of employed persons was changed to include persons who worked without pay between 1 and 14 hours per week in a family business or on a farm (i.e. unpaid family helpers). For further information, see paragraphs 36 and 37 of the Explanatory Notes to the February 1987 issue of *The Labour Force, Australia* (6203.0).

### **Survey sample redesign**

7. The LFS sample has been redesigned and reselected using information collected in the 1991 Population Census. The new sample was phased in over the period September to December 1992. For details, see *Information Paper: Labour Force Survey Sample Design* (6269.0).

8. For the most part, one quarter of the new sample was introduced each month so that, by December 1992, the entire new sample was in place. Replacement generally occurred at the rotation group level with two groups being substituted each month. Such a pattern of implementation meant that any changes to labour force estimates due to differences between the two samples, or any other influences, were spread over the four months rather than being concentrated in one inter-month period.

9. This phase-in scheme applied to the private dwelling sample in urban areas. The new sample for non-private dwellings and private dwellings in rural areas was introduced in a single stage in November 1992.

### **Reliability of the estimates**

10. Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error. The *sampling error* is a measure of the variability that occurs by chance because a sample, rather than the entire population, is surveyed. One measure of the likely difference resulting from not including all dwellings in the survey is given by the *standard error*. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included in the survey, and about nineteen chances in twenty that the difference will be less than two standard errors.

11. Standard errors of estimates for the latest month and of estimates of movements since the previous month are shown in the tables. Standard errors of other estimates and other movements may be determined by using information in the Technical Notes in *The Labour Force, Australia* (6203.0).

12. The smaller the estimate the higher is the relative standard error. Very small estimates are subject to high standard errors (relative to the size of the estimate) which detract seriously from their value for most reasonable uses. In the tables in this publication, only estimates with relative standard errors of 25 per cent or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (eg. \* 3.4) to indicate they are subject to high standard errors and should be used with caution.

13. Examples of the calculation and use of standard errors are given below:

- (a) An estimate of 500,000 employed persons aged 15 to 19 has a standard error of about 9,000. Therefore there are about two chances in three that the number that would have been produced if all dwellings had been included in the survey will be within the range 491,000 to 509,000 and about nineteen chances in twenty that the number will be within the range 482,000 to 518,000.
- (b) Consider estimates for females employed part time in Australia of 1,387,000 in one month and 1,400,000 in the next month. This represents an upward movement of 13,000 with a standard error of 9,800. Therefore, there are about two chances in three that if all dwellings had been included in the survey, the movement would have been in the range +3,200 to +22,800, and about nineteen chances in twenty that it would have been within the range -6,600 to +32,600.

14. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by respondents, errors made in collection such as in recording and coding of data, and errors made in processing the data. Inaccuracies of this kind are referred to as the *non-sampling error*, and they may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

#### **Seasonal adjustment and trend estimation**

15. Seasonally adjusted series are published in Tables 2, 5 and 10. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove the irregular or non-seasonal influences

which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement with the following frequency:

Employment:	5 in 10 monthly movements
Unemployment:	7 in 10 monthly movements
Unemployment rate:	7 in 10 monthly movements
Participation rate:	9 in 10 monthly movements

16. Smoothing seasonally adjusted series produces a measure of trend by reducing the impact of the irregular component of the series. The trend estimates have been derived by applying a 13-term Henderson-weighted moving average to the series. Trend series are used to analyse the underlying behaviour of the series over time. These are published in Tables 3, 6 and 11.

17. While this smoothing technique enables estimates to be produced for the latest month, it does result in revisions to the most recent months as additional observations become available. Generally, subsequent revisions become smaller, and after three months have a negligible impact on the series. There will also be revisions as a result of the annual review of seasonal factors.

18. Trend estimates for the Australian Capital Territory and the Northern Territory are published in Table 11. Unadjusted series for the two Territories have shown, historically, a high degree of variability, which can lead to considerable revisions to the seasonally adjusted estimates after each annual seasonal factor re-analysis. Seasonally adjusted estimates are not currently published for the two Territories. The most recent six months trend estimates are subject to revision. For the three most recent months, the revision may be relatively large. Inferences about trends drawn from smoothed seasonally adjusted (trend) estimates for months earlier than the latest three months are unlikely to be affected by month to month revisions. They may be affected by revision resulting from the annual re-analysis of seasonal factors.

19. Analyses showing the revisions to trend estimates of employment and the unemployment rate that would occur given certain movements in the seasonally adjusted estimates are shown on page 4. Similar analyses can be undertaken using different variables. For further information about trend revisions and the availability of unpublished analyses, contact Heather Crawford on (06) 252 6525.

### Semi-logarithmic graphs

20. Graphs on page 2 have been drawn using a logarithmic vertical scale to aid comparison of rates of growth in series of differing magnitude. Equal distances on the vertical scale (over equal time periods) indicate equal rates of growth for graphs on the same page.
21. Users may wish to refer to the ABS Information Papers *A Guide to Smoothing Time Series - Estimates of 'Trend'* (1316.0), and *Time Series Decomposition - An Overview* (1317.0) for more detailed information on smoothing of seasonally adjusted time series data.

### Related publications

22. Users may also wish to refer to *The Labour Force, Australia* (6203.0). This publication contains a detailed list of related publications which are available on request.
23. Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

### Unpublished statistics

24. As well as the statistics included in this and related

publications, the ABS has other relevant unpublished data available. Inquiries should be made to Heather Crawford on Canberra (06) 252 6525 or any ABS State office.

### Symbols and other usages

- \* subject to sampling variability too high for most practical uses. See the Technical Notes in 6203.0 for more details.
- . . not applicable
- r revised

25. Estimates have been rounded and discrepancies may occur between sums of the component items and totals.

### Forthcoming issues

26. The following table shows the dates on which *The Labour Force, Australia, Preliminary* (6202.0) publication is scheduled to be released.

	Issue	Release Date
1993	October	11 November 1993
	November	9 December 1993
	December	13 January 1994
1994	January	10 February 1994
	February	10 March 1994
	March	7 April 1994

IAN CASTLES  
Australian Statistician

## GLOSSARY

**Actively looking for work:** Includes writing, telephoning or applying in person to an employer for work; answering a newspaper advertisement for a job; checking factory or Commonwealth Employment Service noticeboards; being registered with the Commonwealth Employment Service; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.

**Attending school:** Persons aged 15 to 19 who, during the reference week, were enrolled full time at secondary or high schools.

**Attending tertiary educational institution full time:** Persons aged 15 to 24 who, during the reference week, were enrolled full time at a TAFE college, university, or other educational institution.

**Average absolute percentage change:** The average monthly percentage change (regardless of sign) in a time series of estimates.

**Employed:** Persons aged 15 and over who, during the reference week:

- (a) worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employees, employers and self-employed persons); or
- (b) worked for one hour or more without pay in a family business or on a farm (i.e. unpaid family helpers); or
- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
- (d) were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work.

**Full-time workers:** Employed persons who usually worked 35 hours or more a week (in all jobs) and others who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week.

**Labour force:** For any group, persons who were employed or unemployed, as defined.

**Labour force status:** A classification of the civilian population aged 15 and over into employed, unemployed or not in the labour force, as defined. The definitions conform closely to the international standard definitions

adopted by the International Conferences of Labour Statisticians.

**Not in the labour force:** Persons who were not in the categories employed or unemployed as defined.

**Participation rate:** For any group, the labour force expressed as a percentage of the civilian population aged 15 and over in the same group.

**Part-time workers:** Employed persons who usually worked less than 35 hours a week and who did so during the reference week.

**Seasonally adjusted series:** A time series of estimates with the estimated effects of normal seasonal variation removed. See paragraph 15 of the Explanatory Notes for more detail.

**Trend series:** A smoothed seasonally adjusted series of estimates. See paragraphs 16 to 19 of the Explanatory Notes for more detail.

**Unemployed:** Persons aged 15 and over who were not employed during the reference week, and:

- (a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week and:
- (i) were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
- (ii) were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or
- (b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.

**Unemployed looking for first full-time job:** Unemployed persons looking for full-time work (as defined) who had never worked full time for two weeks or more.

**Unemployed looking for full-time work:** Unemployed persons who actively looked for full-time work or were to resume a full-time job, from which they had been stood down.

**Unemployed looking for part-time work:** Unemployed persons who had actively looked for part-time work only, or were to resume a part-time job, from which they had been stood down.

**Unemployment rate:** For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.

## For more information ...

The ABS publishes a wide range of statistics and other information on Australia's economic and social conditions. Details of what is available in various publications and other products can be found in the *ABS Catalogue of Publications and Products* available at all ABS Offices (see below for contact details).

### Information Consultancy Service

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see Information Inquiries below for contact details).

### National Dial-a-Statistic Line

0055 26 400

This number gives you 24 hour access, 365 days a year for a range of statistics.

### Electronic Data Services

A wide range of ABS data are available on electronic media. Selections of most frequently requested statistics are available, updated daily, on DISCOVERY (Key \*656#). The ABS PC TELESTATS service delivers major economic indicator main features ready to download into personal computers on the day of release. The PC AUSSSTATS service enables on-line access to a data base of thousands of up-to-date time series. Selected datasets are also available on diskette or CD-ROM. For more details on electronic data services available, contact Information Services in any of the ABS Offices (see Information Inquiries below for contact details).

### Bookshops and Subscriptions

There are over 500 titles of various publications available from ABS bookshops in all ABS Offices (see below Bookshop Sales for contact details). The ABS also provides a subscription service through which nominated publications are provided by mail on a regular basis at no additional cost (telephone Publications Subscription Service toll free on 008 02 0608 Australia wide).
